Sharpener

**HOSELINK**<sup>®</sup>

## Kit Contents

---

1 x sharpener

## Product Instructions

---

The sharpener has several different sharpening edges depending on your needs.

Single-sided blade sharpener: For use on single-edged blades, such as secateurs or loppers.

Dual-sided sharpener: For use on double-edged blades, such as knives.

Steel and Ceramic honing bar: Perfect for honing blades.

## Single-sided Blade Sharpener

---

This edge is great for all single-edged blades. To use, make sure you align the correct sharpening edge with the blade. In this case, you want the flat, non-edge, side of the blade to rest against the square metal stop. With the edge of the blade on the sharpening stone side.

## Double-sided Blade Sharpener

---

This sharpening edge is for your double-edged blades. Simply run the edge of the blade between the two sharpening stones.

## Steel Honing Bar

---

The steel honing bar is perfect to hone your blades and keep them sharp, without needing to resort to full sharpening. The steel bar will provide the best result but may wear the blade more than the ceramic option.

## Ceramic Honing Bar

---

Like the steel, the ceramic honing bar is great for keeping the edge on your cutting tools. The ceramic is not as abrasive as the steel, so is the best option if you are honing more frequently as it will not wear the blade as much. It is also the perfect option to hone scissors.

## Oil Well

---

The sharpening will come with a supply of oil and applicator to help protect newly sharpened edges from corrosion. Conveniently stored in the handle, simply unscrew the black knob to access the oil. The knob will have a small sponge attached and double as the applicator.
